

July 9, 2020

Please be aware we completed the additional industry-required, governor-directed universal testing on 07/02/2020. The result of lab values are trickling in to us from the Maryland Department of Health. We have received one positive resident result to date from the 07/02/2020 testing. We are informed this is likely a false positive; a result of actual dead viral RNA that is not infectious. The resident, in an abundance of caution, has been placed in isolation.
