

Weekly Family Update: 07/30/21

Skilled Nursing Facility:

The latest round of regular staff testing has resulted in one fully vaccinated staff member testing positive through rapid testing and subsequently negative through PCR testing. This could be a result of a faulty test. In an abundance of caution however, the employee is on quarantine and the first round of all staff and resident testing has been completed resulting in no additional positive cases. In addition, we are following all Maryland Department of Health requirements which include temporarily ceasing visitations. We will be performing a second round of testing which will be completed today. We will communicate as soon as we are able to resume visitation.

Assisted Living and Memory Care are not effected by this vaccinated employee's potential breakthrough case. The latest round of regular testing in these centers has resulted in no positive staff or residents to date.
